“Learn from me the most important basic rules for radiator protection.”

▪

- Water alone is not sufficient for cooling—only by adding the protective GLYSANTIN® concentrate can damage be avoided. The problem: water without coolant concentrate expands in frost, evaporates at 100 degrees Celsius, and accelerates rust formation.

Never use coolant concentrates undiluted! With this mixture you’re always right: GLYSANTIN®/ Water: 50/50 (1/1 parts)

"This is what you should always consider."

- Coolant mixture during repairs should always be replaced completely (flush and clean the cooling system beforehand).
- For older vehicles, replace the coolant mixture every 3 to 4 years.
- Use clean (not too hard) tap water, deionized or distilled water.
- Follow the vehicle manufacturer's instructions.

Caution: Incorrect use leaves the cooling system unprotected and at risk!
